

Dietrich Hoffman (Ph.D.), Klaus D. Brunnemann (M.S.), Nancy J. Haley (Ph.D.).

Researchers at the American Health Foundation (Ernst Wynder, President).

Hoffman and Brunnemann are noted for their research on N-Nitrosamines in tobacco smoke and, more recently, on the effects of smoking on DNA-adduct formation. Hoffman is a vocal critic of tobacco smoking.

Nancy Haley directed a large sidestream smoke/animal inhalation experiment in 1986-87 in which, according to published pre-reports, exposed animals had longer survival times than did controls. Haley has also published in the area of body fluid measurements (cotinine) of nonsmokers for determination of exposure to ETS.
